

FAI Bio-library

We generate innovative content on the Atlantic Rainforest biome, the yerba mate productive cycle, green corridors and biodiversity that we use during visits and workshops and put on our website for educators from anywhere in the world to use.

Our purpose

Allow children, youth and educators to experience the Atlantic Rainforest biome through innovative curriculum design connected to nature, generating awareness about sustainable production and care for the environment. ●●

Share our teaching methodology of deep learning during visits by local schools. ●●●

Provide virtual access to quality learning materials for self-paced learning in educational establishments. ●●●

Our actions

We launched a pilot program in 2020 using nature-based educational materials that we developed in workshops and then shared with local teachers for them to explore with their students in nearby schools.

At the same time, we also developed specific material that we shared with students and teachers during their field trips to the FAI reserve.

Each of the lesson plans contain content of interest, activities, worksheets and learning dynamics that can be downloaded for free from our website.

Our edge

We aim to stay close

We take the learning materials to local schools in hard copy and also make them available on our website, so wherever they are, teachers can have access to our activities when they cover subjects related to the Misiones rainforest biome, the yerba mate production cycle, green corridors, biodiversity, etc.

The material has been designed for self-paced use by teachers and students, following methodologies associated with deep learning, project-based learning, multiple intelligences and eco-literacy.

Our data SINCE 2020

- Workshop on green corridors: Teaching sequence for educators
- Activity journal
- Classroom material: "Rainforest Flora and Fauna in Misiones"
- FAI brochure
- Illustration of the Atlantic Rainforest biome for coloring.
- In development: brochure on Agroforestry Systems reserve visits and FAIbulosa magazine.
